TEMPORARY LOSS OF SEWER SERVICE ON FARR STREET

(Turlock, CA | October 23, 2024) – The City of Turlock is actively addressing a loss of sewer service on a portion of Farr Street between W. Main Street and Columbia Avenue in City Council District Two. On Wednesday, October 23rd, following construction activities on Farr Street, crews discovered damage to a six-inch sewer main affecting five residential homes and potentially one business.

Construction and repairs to the sewer line began this evening.

The affected business and homes will not have access to sewer service while repairs are being made. For their convenience, the City of Turlock will offer appropriate services to those impacted.

“We recognize the significant impact this situation has on our community,” said Municipal Services Director Christopher Fisher. “The City is taking all necessary steps to assist those affected and to expedite repairs as quickly as possible.”

In addition, District Two Councilmember Rebecka Monez stated, “My main concern is for the affected families; having grown up on the west side, I empathize with those impacted and am confident that staff will ensure any disruptions are minimized.”

Prior to the start of construction, the sewer main underwent a pre-construction investigation, which included a camera inspection. Compared to routine inspections, it was found to be in sound condition with no defects.
